

## Introduction to GitHub

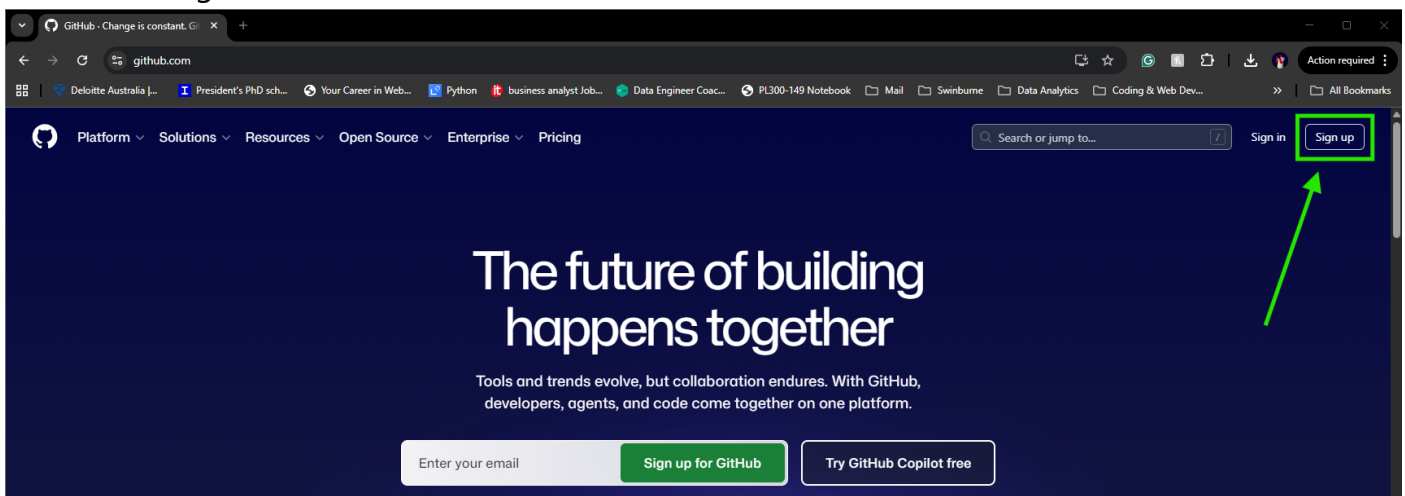

### Part A: Account Setup

#### Step 1: Go to GitHub

1. Open any browser and go to the following website: <https://github.com/>

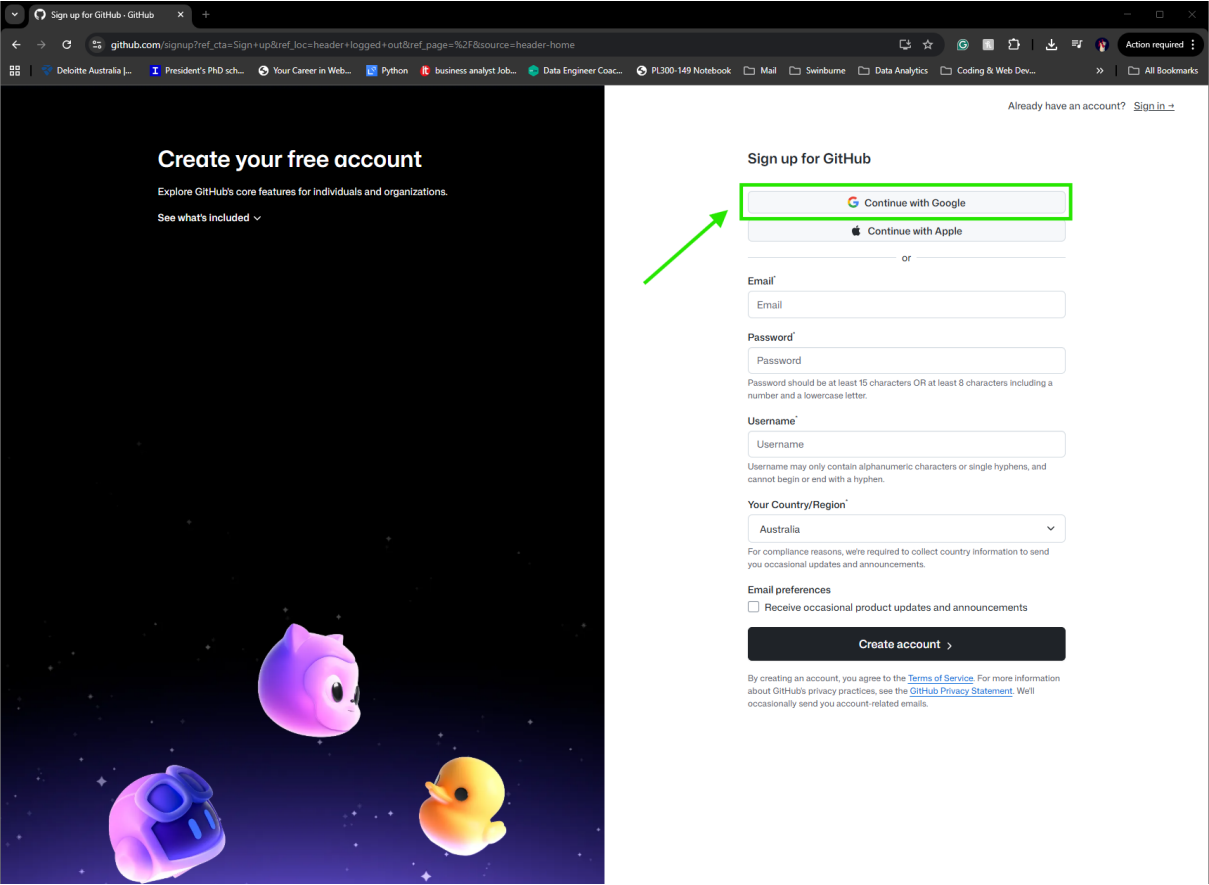

2. Click **Sign up** at the top right corner of the browser. If you already have a GitHub account, click Sign in instead.

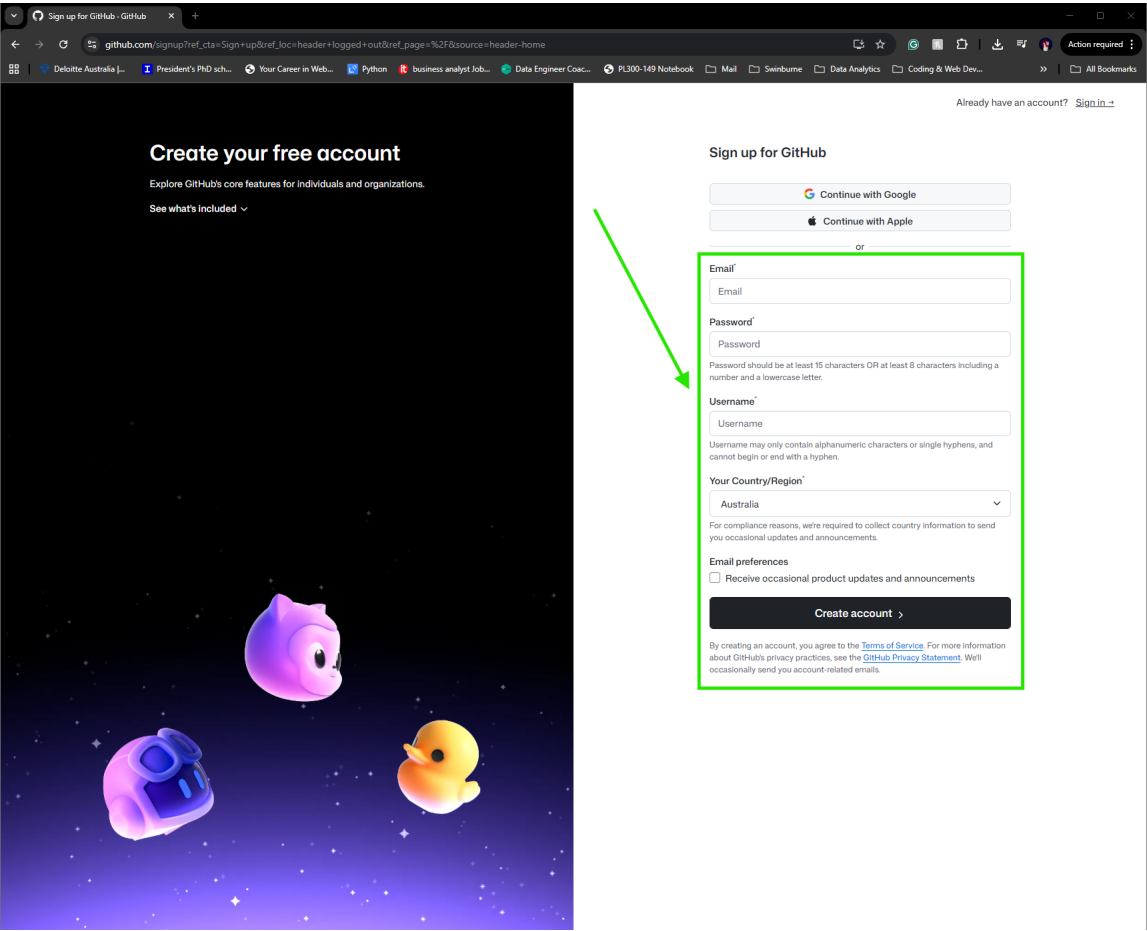

#### Step 2: Enter Details

**Note:** You can use your personal google email for your future development by clicking on Continue with Google then proceed with email, password and verification.

Or

1. Fill in your details to complete the registration.

2. Rules:

- Username rules:

- Must be unique globally and referred to your name.
- Cannot be easily changed later.
- Will appear in your portfolio URL.

- Example: <https://github.com/johnsmith123>

- Be careful with your usernames, as your GitHub account may later be used as part of your professional portfolio.

3. Verification with Puzzle/CAPTCHA and Check your email to verify your account.

4. Your account will be registered under Free Plan. This Free Plan will be enough for usage in this unit. No need to proceed with any Pricing Plan for this unit.

## Part B: Understanding GitHub

Before continuing, it is important to understand a few basic terms.

**1. Repository:** A repository is a project folder stored on GitHub. Please refer to Lecture 2 (on Relative Paths) and Lecture 3 (Folder Structure).

### Example structure of a web project:

```
my-website/  
├── index.html  
├── style.css  
├── images/  
│   ├── image1.png  
│   └── image2.png  
└── script.js
```

**Remember:**

- One Repository = One Project
- One Assignment = One Repository

**2. Commit:** A commit records a change you made to your files.

### Example:

**Before:**

```
<h1>Hello</h1>
```

**After:**

```
<h1>Hello World!</h1>
```

=> **Commit Message:** Updated heading text

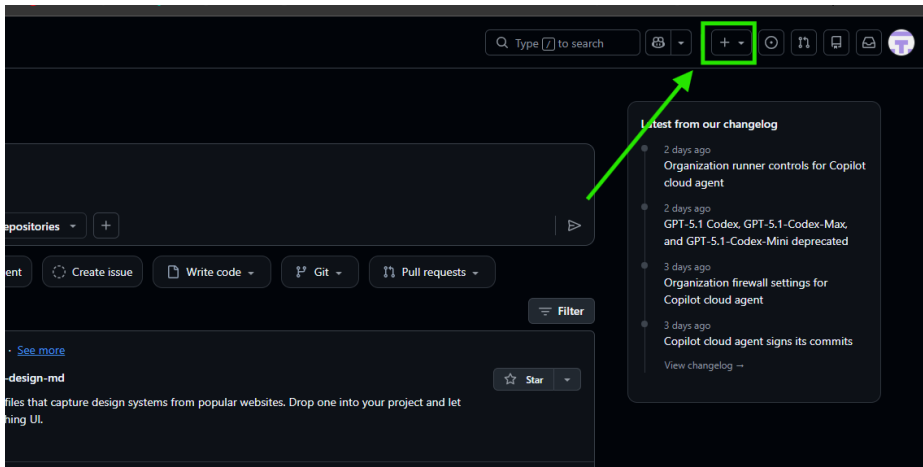

Think of a commit as saving a version of your work.

**3. Branch:** Think of a branch like a separate version of your project used for development. For this unit, you only need to use the main branch. You can ignore branches for now.

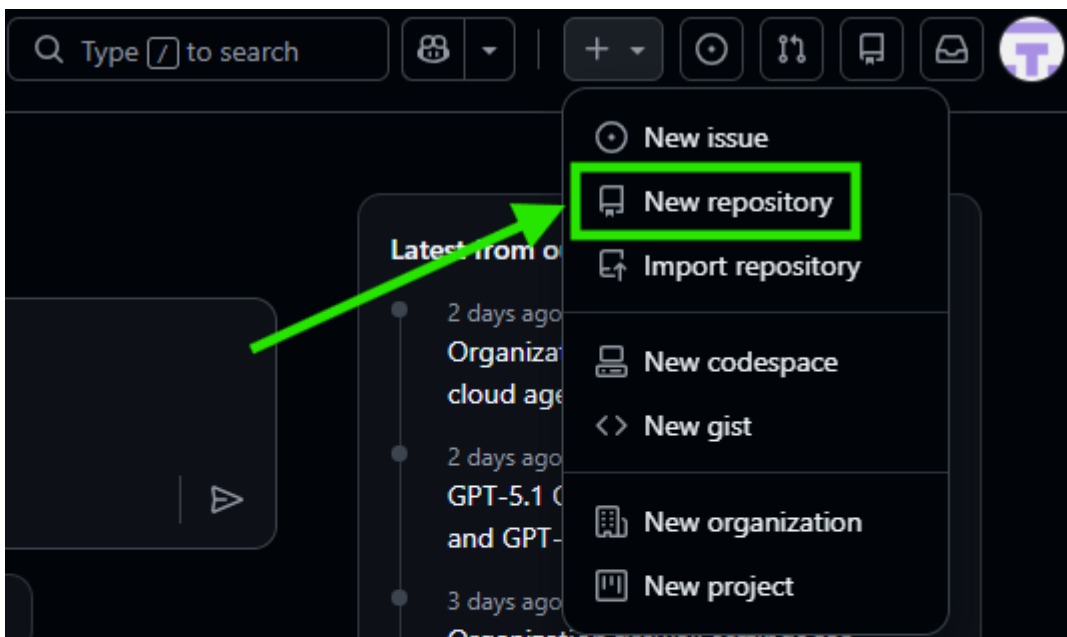

## Part C: Create Your First Repository

### Step 1: On your main Dashboard Interface

1. Click on the "+" button on the top-right corner of the interface.

2. There will be a drop-down menu appeared. Then Click on "New Repository".

### Step 2: Configuration

Fill in the following settings.

1. **Repository name:** e.g. wd-lab01, wd-lab02, wd-assign01.
2. **Description: (Optional):** e.g. My first website, My work on Web Development, "any".
3. **Choose Visibility:** Public.
4. Add **README** file.
  - Why?
    - Prevent empty repository errors
    - Prepare the repository for GitHub Pages

## Create a new repository

Repositories contain a project's files and version history. Have a project elsewhere? [Import a repository](#).  
Required fields are marked with an asterisk (\*).

1

### General

**Owner \*** webdevelopment4swin / **Repository name \*** wd-assign01  
✓ wd-assign01 is available.

Great repository names are short and memorable. How about [verbose-octo-train](#)?

**Description**  
My First Website  
16 / 350 characters

2

### Configuration

**Choose visibility \***  
Choose who can see and commit to this repository Public

**Add README**  
READMEs can be used as longer descriptions. [About READMEs](#) Off

**Add .gitignore**  
.gitignore tells git which files not to track. [About ignoring files](#) No .gitignore

**Add license**  
Licenses explain how others can use your code. [About licenses](#) No license

[Create repository](#)

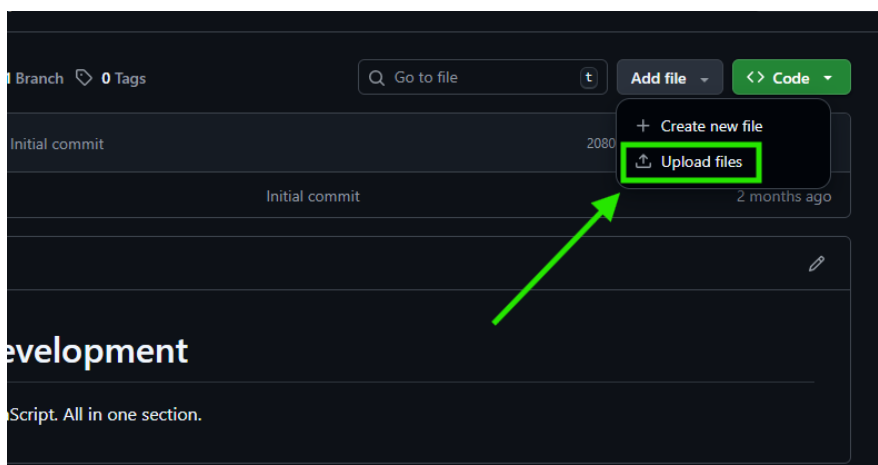

**Step 3: After that, then click "Create Repository" button.**

Your repository will now be created.

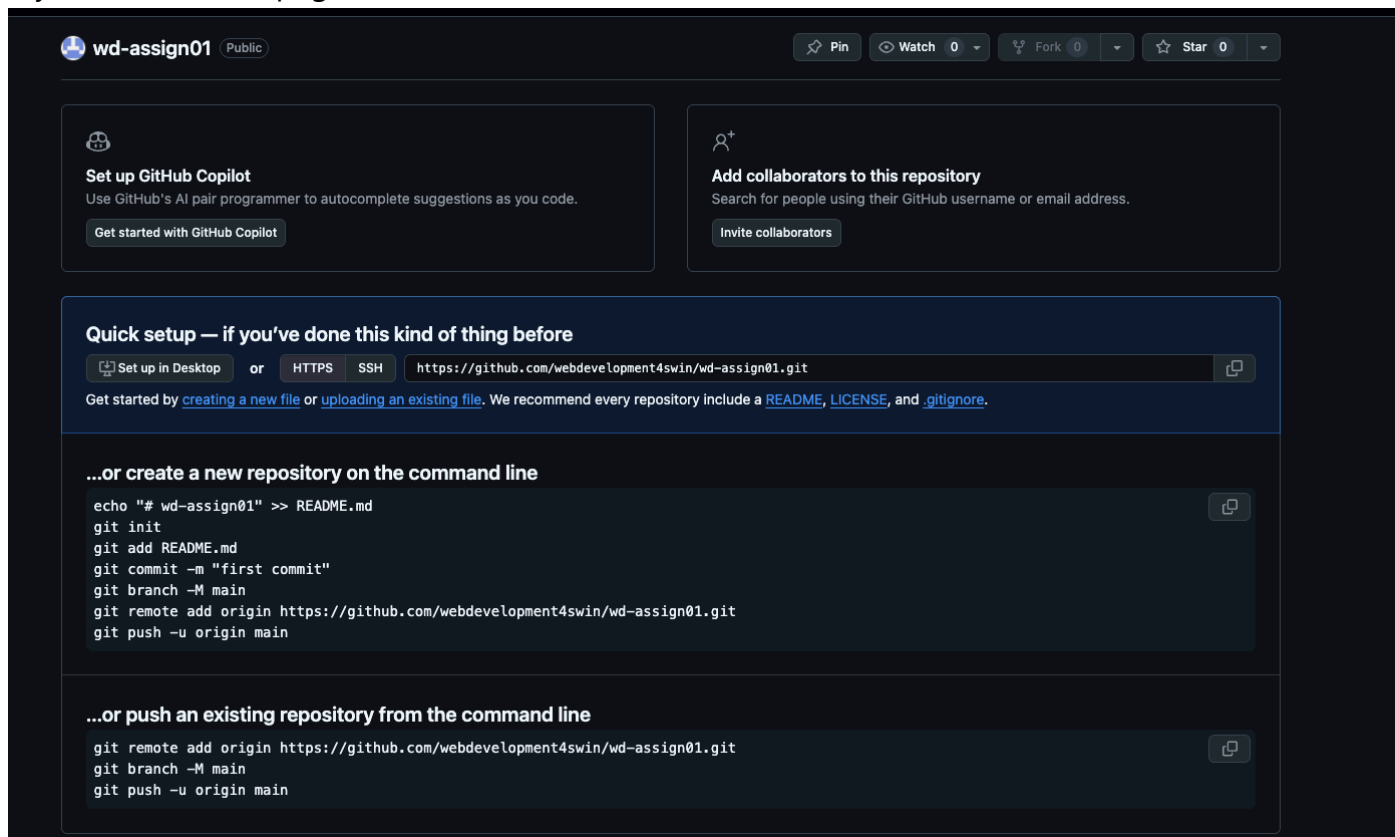

## Part D: Upload Files

### Step 1: On your first Repository

1. Find "Add file" button then Click on it. There will be a drop-down menu appear. Then Click "Upload files".

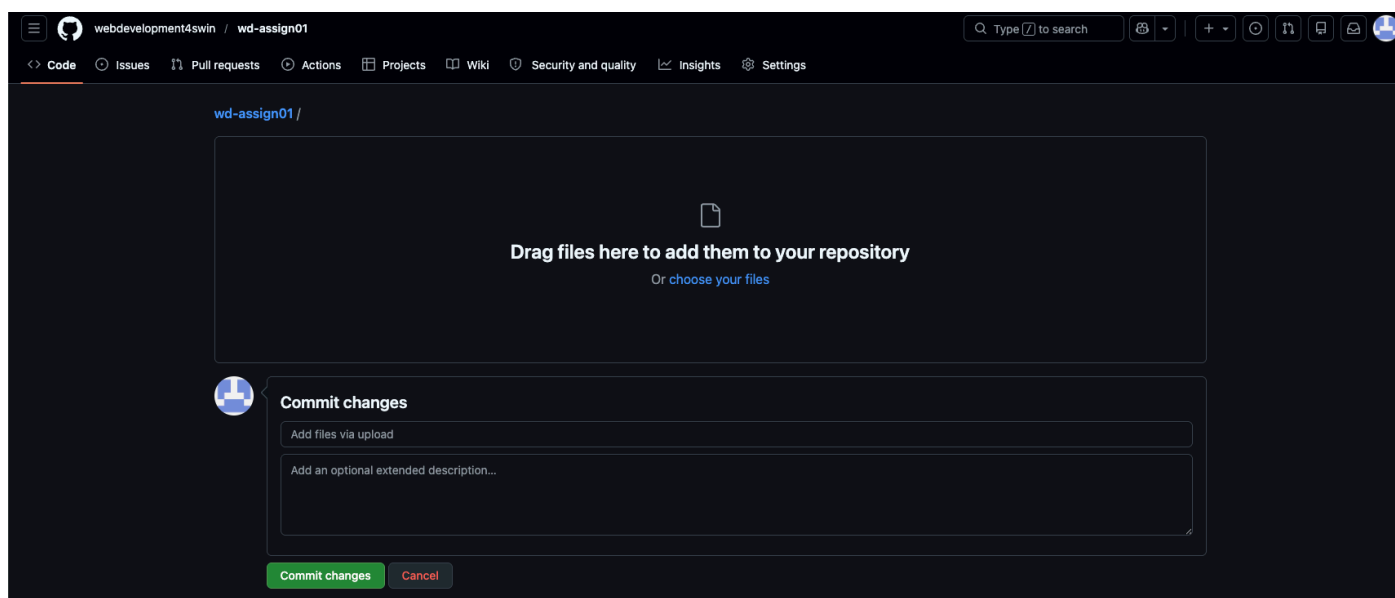

If your current webpage looks like this:

Click **uploading an existing file**.

2. You should be able to see the following interface.

## Step 2.1: On the “Upload File” interface with Drag & Drop File

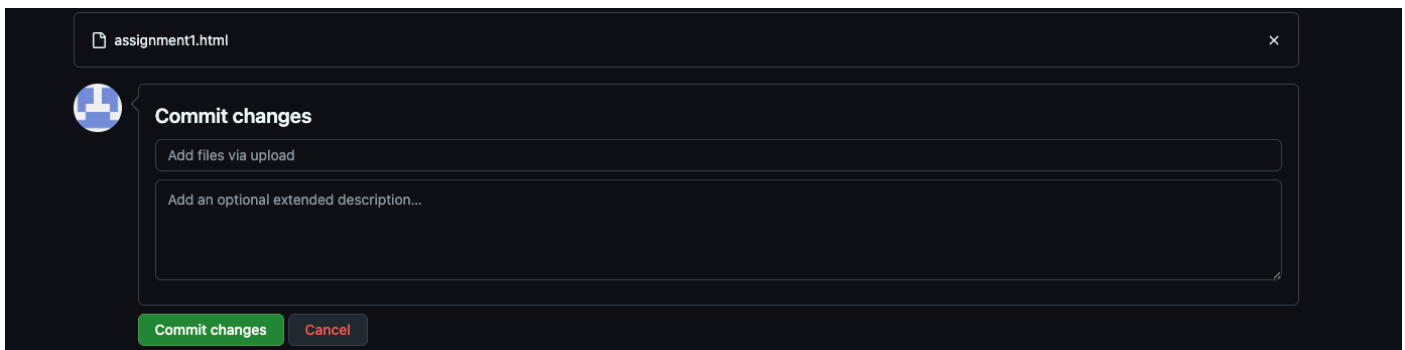

1. Open your local File Explorer and find your work.
2. Then click on your work, drag it into the “Drag files here” area on the GitHub Page.

## Step 2.2: On the “Upload File” interface with Choose your files

1. Click on “choose your files”. Then a File Explorer interface will appear.
2. Select the files you want to then click “Open”.

## Step 3: On the Commit Changes area.

1. You can use the default Commit Changes messages “Add files via upload” or fill in with your message (e.g. Initial upload of website files).
2. Leave everything else default.
3. Then Click on “Commit changes” button.

4. A file will be added into your repository.

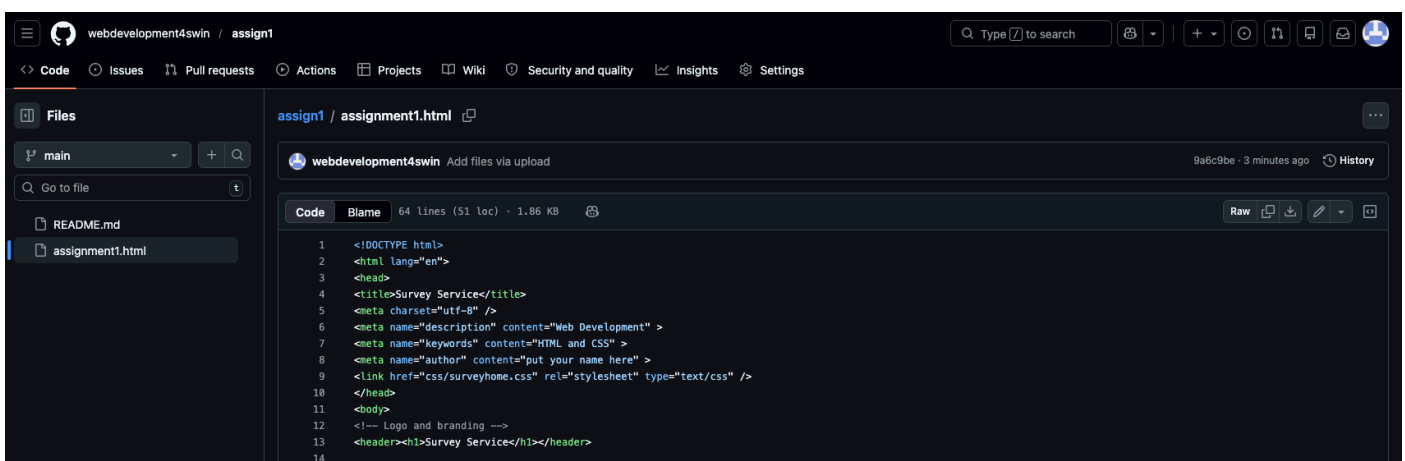

**Notice:** Please do not upload .zip/.rar file. Please upload the ACTUAL file.

## Part E: Edit Files Directly

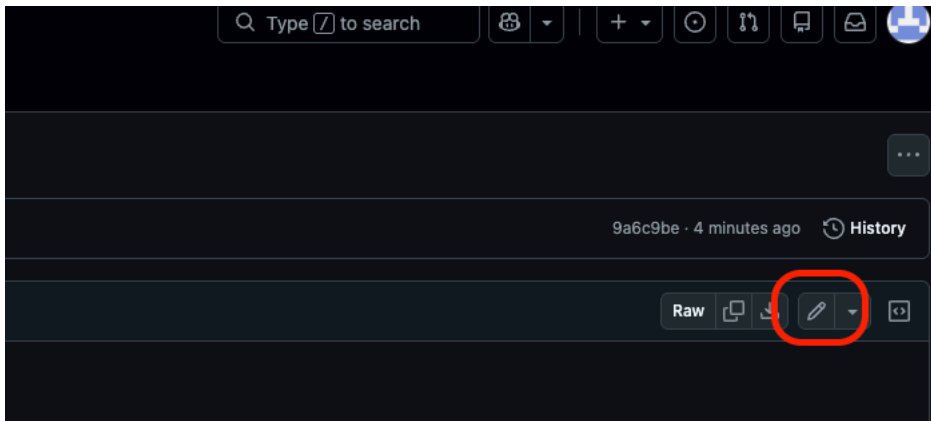

Sometimes you may want to edit files directly on GitHub.

### Step 1: Click on the file you want to edit.

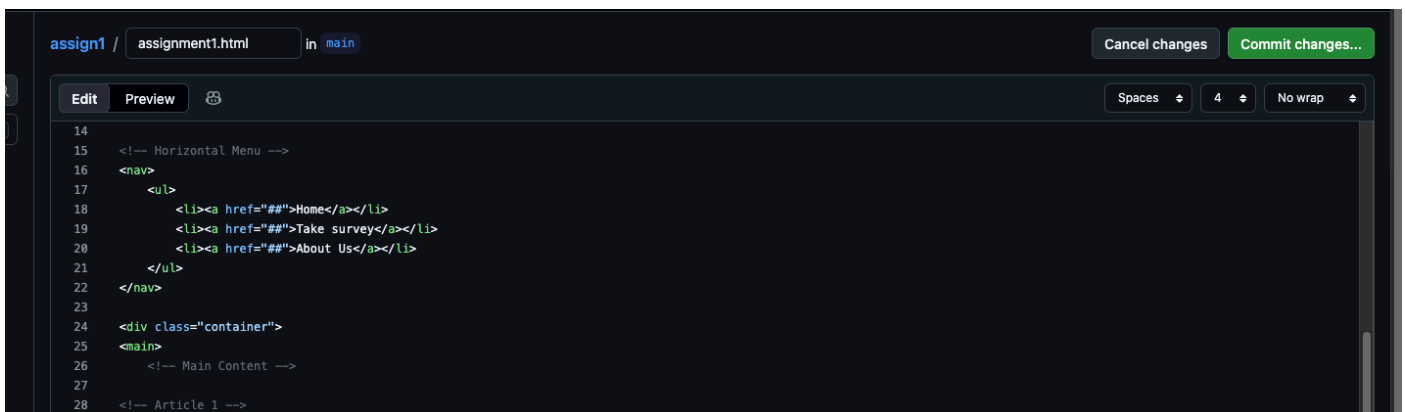

The interface you may see:

### Step 2: Click on icon (Edit this file)

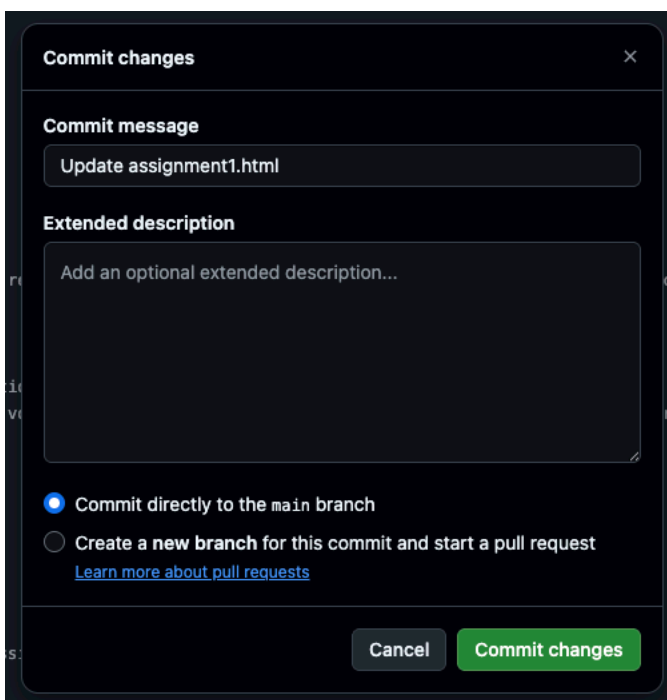

### Step 3: Modify your Code.

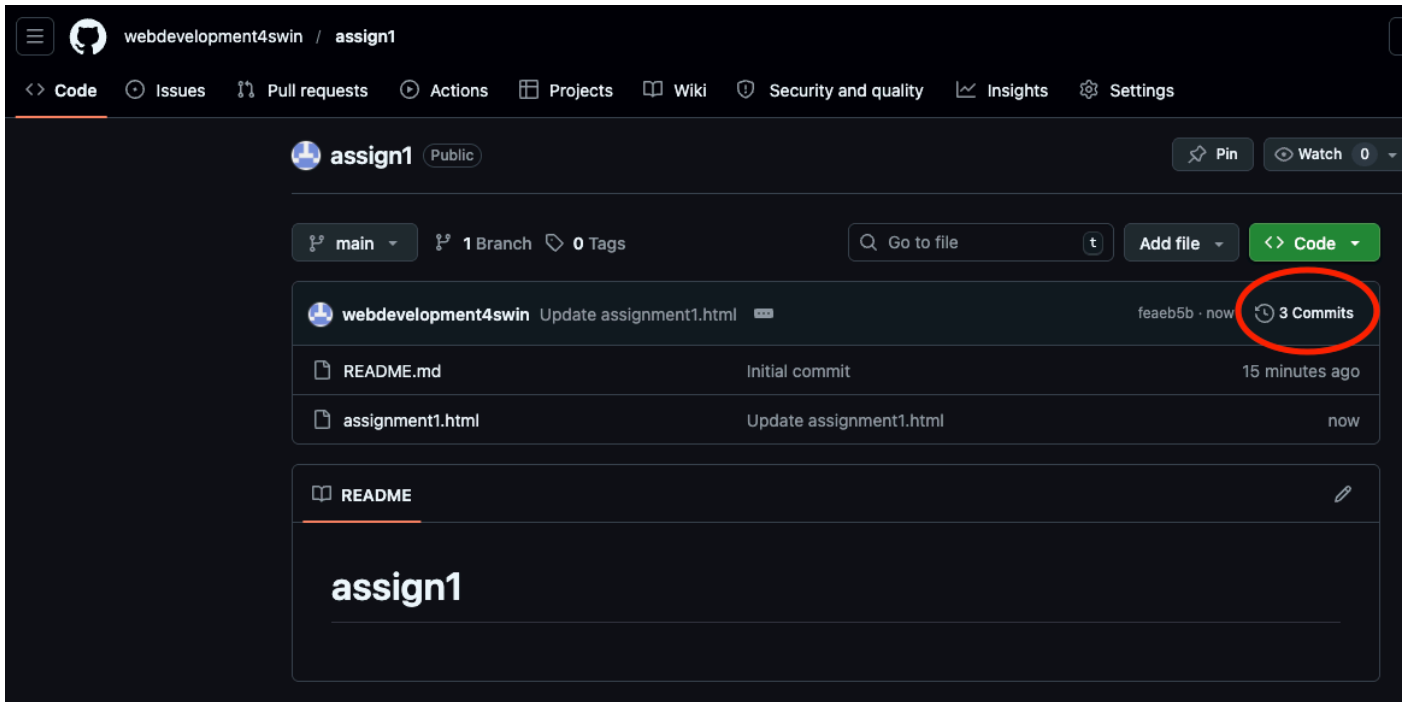

### Step 4: Click on “Commit changes...” button

1. Fill in your Commit message. (e.g. Updated lab1.html)
2. Extended description (optional): You can leave default if you want to.
3. Leave anything else default then click on “Commit changes” button.

To be able to see your Commit changes, on the main Repository, click on "Commits".

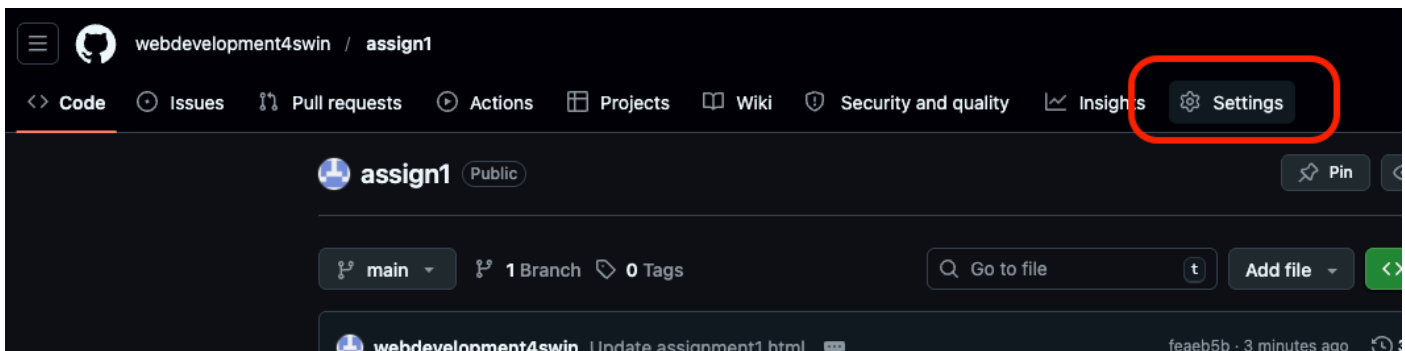

And you will be able to see your Commits changes.

## Part F: GitHub Pages

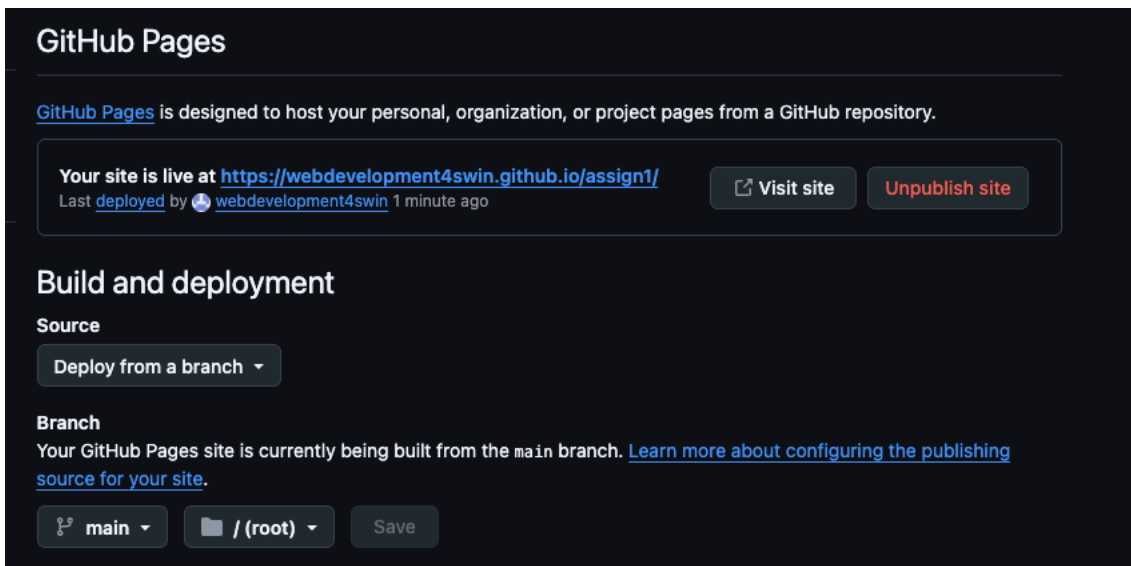

GitHub Pages allows you to publish your website online.

### Step 1: Open Repository Settings

### Step 2: On the main Settings page

1. In the left sidebar, click: Pages
2. Under "Source" Select **Deploy from a Branch**
3. Then from Branch, select **main** then Folder: /(root) then Click Save
4. Wait 10 to 30 seconds (depends) then URL will appear. GitHub will generate a link like <https://your-username.github.io/Web-Development/>. If not, refresh page and you will be able to see.

Now, how to access your html file

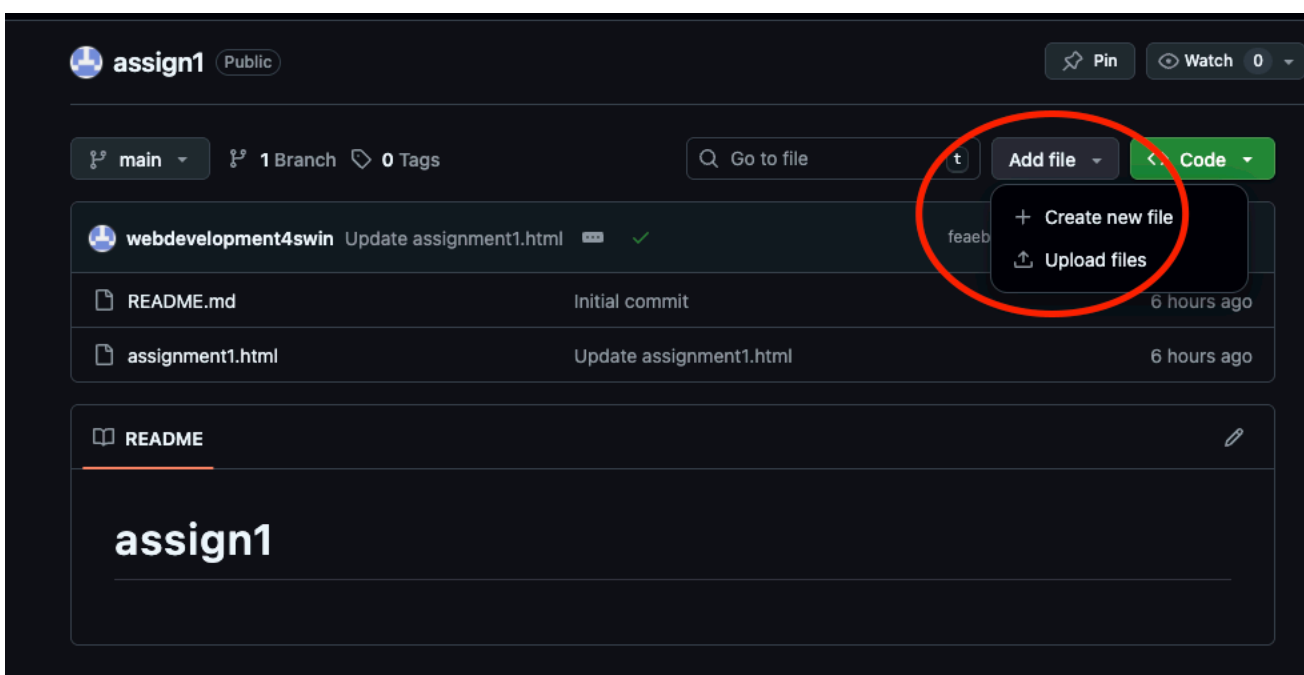

- You got this link <https://your-username.github.io/Web-Development/>  
For example: <https://webdevelopment4swin.github.io/assign1/>
- Add file path to the link and now your link will be for example: add assignment1.html behind the link: <https://webdevelopment4swin.github.io/assign1/>  
For example: <https://webdevelopment4swin.github.io/assign1/assignment1.html>

### Additional Guideline: Creating Folders

GitHub does not allow empty folders. To create a folder:

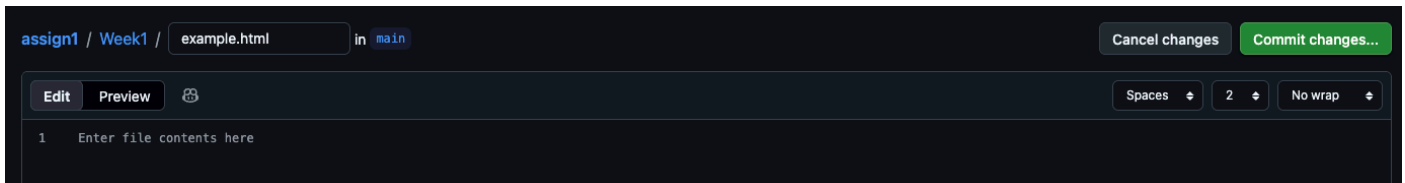

#### Step 1: On the main Repository

1. Click on "Add file" button, then a drop-down menu appear.
2. Click on "+ Create new file".

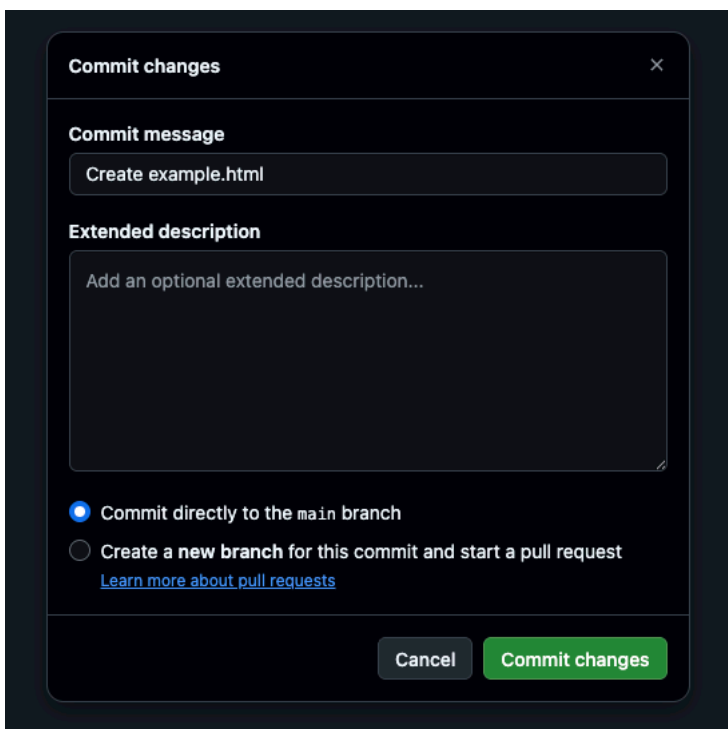

## Step 2: Create simple folder.

1. On the "Name your file..." input field next to your repository's name, type your folder name along with the file name. (e.g. Week1/example.html).
2. The folder Week1 will now appear.

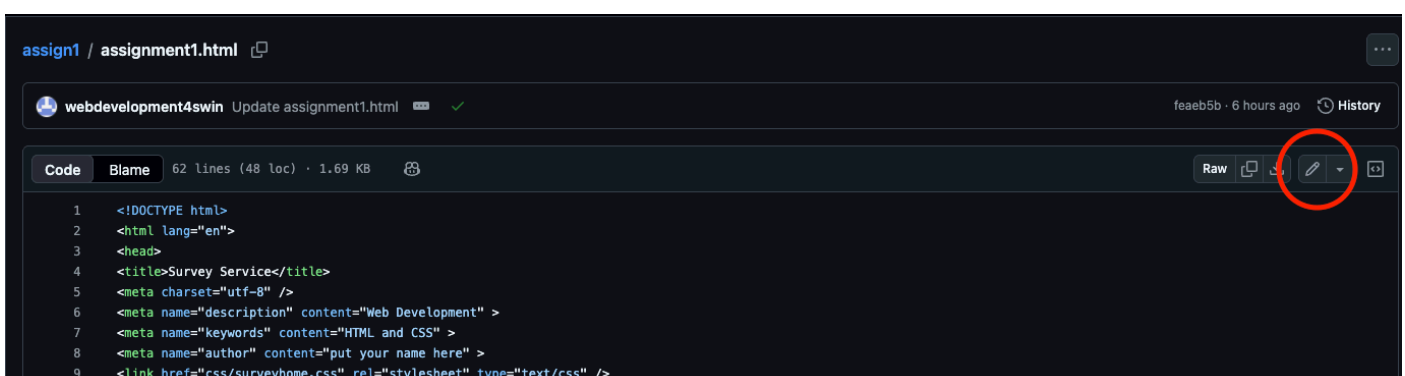

3. Click on "Commit Changes"

From there, you will be able to add more files you want.

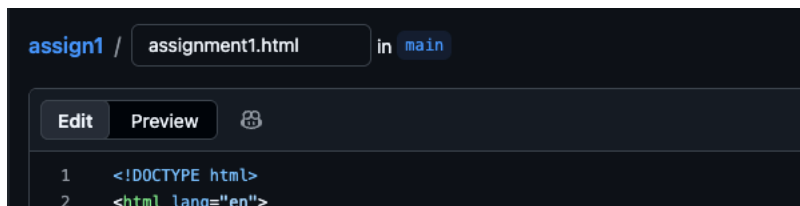

Now, If you want to move other into another folder.

1. First click the file you want to move (for example, the assignment1.html)
2. click on  (Edit this file)

3. Then at the top of the relative path, insert folder before lab1.html via /.

Before:

After:
